

Inspect individual animals with GO.Inspection

GO.Inspection is a general inspection and classification system for veterinarians.

The system tracks individual animals on one or more parallel conveyor systems, depending on how many parts the animal is split into – e.g. plucks and carcasses.

A conveyor line is equipped with several touch panels that display the individual animals going by. While the veterinarians do the inspection of the animal they can easily register pre-configured sickness codes to the animal by a single touch on the panel.

In this way, a record of one or more codes are registered and reported to the individual animal. Depending on the speed, a number of veterinarians, and type of inspection the system can be equipped with as many panels as needed.

About the food processing software GOSystems

Production and distribution companies in the food industry have unique and comprehensive management needs that cannot be solved in a standard ERP solution or through a traditional automation solution.

Frontmatec has developed the MES system GOSystems, which meets those needs.

GOSystems is an integrated and flexible system that controls the slaughter process from the reception of live animals to classification. It allows processors to control and monitor key points in the slaughter process in real time while ensuring traceability and execution of quality control procedures.

Specifications

- System is based on the latest and most modern Microsoft technology
- Interface to MES server and PLC

Benefits

- Parallel conveyor system for e.g. plucks and carcasses
- Data is following the animal

Steps

- Tracking of individual animals
- Carcass is either approved or classified as suspect or failed
